                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes a method for monitoring differential CC expression of genes in a first filamentous fungal (FF) cell relative to CC expression of the same genes in one or more second filamentous fungal CC cells. The method uses fluorescence-labeled nucleic acids isolated from CC the FF cells and a substrate of expressed sequence tags (EST). The ESTs CC are used in the methods for monitoring differential expression of genes CC in a first filamentous fungal (FF) cell relative to expression of the CC global expression of genes from FF cells allows the production potential of the microorganisms to be improved. New genes may be discovered, and CC gene copy number variation and stability can be monitored. The expression of genes can be used to study how FF cells adapt to changes in culture conditions, environmental stress, spore morphogenesis, recombination of genes can be used to study how FF cells adapt to changes in culture advantages over genomic or random cDNA clones including elimination of redundancy as one spot on an array equals one gene or open reading frame, cc and organisation of the microarrays based on function of the gene CC groducts to facilitate analysis of the results. AAF07478 to AAF11247 CC ESTs from Abspergillus niger; AAF11854 to AAF14878 represents ESTs from Aspergillus niger; AAF11879 to AAF1327 represents ESTs from Aspergillus niger; AAF11879 to AAF1337 represents ESTs from appresents and AAF14879 to AAF1337 represents ESTs from Aspergillus niger; AAF11879 to AAF1337 represents ESTs from Aspergillus niger; AAF11879 to AAF15337 represents ESTs from Aspergillus niger; AAF1879 to AAF15337 represents ESTs from Aspergillus niger; AAF1879 to AAF15337 represents ESTs from Aspergillus niger; AAF1879 to AAF15337 represents ESTs from ESTS 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches

                                                     The invention relates to novel purified or isolated nucleic acids of cc essential genes of Aspergillus fumigatus. The isolated nucleic acids of cc the invention are used to treat or prevent infections by a pathogenic cc organism such as A. fumigatus, to treat a non-infectious disease in a cc subject (e.g. cancer), to prevent or contain contamination of an object cc biofilm comprising A. fumigatus. The polynucleotides are useful for expressing recombinant protein for characterisation, screening or cc therapeutic use, as markers for host tissues in which the pathogenic cryanisms invade or reside, for comparing with the DNA sequence of A. cc fumigatus to identify duplicated genes or paralgues having the same or similar biochemical activity and/or function, for comparing with DNA sequences of other related or distant pathogenic organisms to identify potential orthologous essential or virulence genes, for selecting and cc making oligomers for attachment to a nucleic acid array for examination of expression patterns, for raising anti-protein antibodies, as an cc antigen to raise anti-DNA antibodies or to elicit another immune cresponse, and for identifying polynucleotides encoding the other protein with which binding occurs or to identify inhibitors of the binding ccurs or to identify inhibitors of the binding ccurs or to identify inhibitors of the binding ccurs of the protein in biological fluids, as a marker for host tissues in which pathogenic organism invade or reside, and to isolate correlative receptors or ligands in the case or virulence cc factors. This polynucleotide sequence represents one of the essential cc genes of Aspergillus fumigatus of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            23-APR-2001; 2001US-0285697P.

New purified or isolated nucleic acids of essential genes of Aspergillus fumigatus, useful for treating or preventing infections by A. fumigatus, or for treating a non-infectious disease in a subject e.g. cancer.

English.

of expression patterns, for raising anti-protein antibodies, as an antiponse, and for identifying polynucleotides encoding the other protein with which binding occurs or to identify inhibitors of the binding interaction. The polypeptides may be used to raise antibodies or to elicit immune response, as a reagent in assays designed to quantitatively determine levels of the protein in biological fluids, as a marker for host tissues in which pathogenic organism invade or reside, and to isolate correlative receptors or ligands in the case or virulence factors. This polymucleotide sequence represents one of the essential genes of Aspergillus fumigatus of the invention biofilm comprising A. fumigatus. The polynucleotides are useful for expressing recombinant protein for characterisation, screening or therapeutic use, as markers for host tissues in which the pathogenic organisms invade or reside, for comparing with the DNA sequence of A. fumigatus to identify duplicated genes or paralogues having the same or similar biochemical activity and/or function, for comparing with DNA sequences of other related or distant pathogenic organisms to identify potential orthologous essential or virulence genes, for selecting and making oligomers for attachment to a nucleic acid array for examination The invention relates to novel purified or isolated nucleic acids of essential genes of Aspergillus funigatus. The isolated nucleic acids cessential genes used to treat or prevent infections by a pathogenic the invention are used to treat or prevent infectious disease in a organism such as A. fumigatus, to treat a non-infectious disease in a subject (e.g. cancer), to prevent or contain contamination of an by A. fumigatus, or to prevent or inhibit formation on a surface an object ace of a of.

The invention relates to novel purified or isolated nucleic acids of essential genes of Aspergillus fungatus. The isolated nucleic acids of the invention are used to treat or prevent infections by a pathogenic organism such as A. fumigatus, to treat a non-infectious disease in a subject (e.g. cancer), to prevent or contain contamination of an object by A. fumigatus, or to prevent or inhibit formation on a surface of a biofilm comprising A. fumigatus. The polynucleotides are useful for expressing recombinant protein for characterisation, screening or therapeutic use, as markers for host tissues in which the pathogenic organisms invade or reside, for comparing with the DNA sequence of A. fumigatus to identify duplicated genes or paralogues having the same or similar biochemical activity and/or function, for comparing with DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         23-APR-2001; 2001US-0285697P.

The polypeptides may be used to raise antibodies or to elicit immune response, as a reagent in assays designed to quantitatively determine levels of the protein in biological fluids, as a marker for host tissues in which pathogenic organism invade or reside, and to isolate correlative receptors or ligands in the case or virulence factors. This polynucleotide sequence represents one of the essential genes of Aspergillus fumigatus of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          sequences of other related or distant pathogenic organisms to identify potential orthologous essential or virulence genes, for selecting and making oligomers for attachment to a nucleic acid array for examination of expression patterns, for raising anti-protein antibodies, as an antigen to raise anti-DNA antibodies or to elicit another immune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 4048 BP; 925

                                                           δ
                                                                                                                                                                                                                                                                                                                CC therapeutic use, as markers for host tissues in which the pathogenic CC organisms invade or reside, for comparing with the DNA sequence of A. CC fumigatus to identify duplicated genes or paralogues having the same or CC similar blochemical activity and/or function, for comparing with DNA CC sequences of other related or distant pathogenic organisms to identify CC potential orthologous essential or virulence genes, for selecting and CC making oligomers for attachment to a nucleic acid array for examination CC expression patterns, for raising anti-protein antibodies, as an CC antigen to raise anti-DNA antibodies or to elicit another immune CC elicit immune response, and for identifying polymucleotides encoding the other protein comparing the binding CC interaction. The polypeptides may be used to raise antibodies or to celicit immune response, as a reagent in assays designed to quantitatively determine levels of the protein in biological fluids, as a marker for CC const tissues in which pathogenic organism invade or reside, and to isolate correlative receptors or ligands in the case or virulence CC factors. This polymucleotide sequence represents one of the essential CC genes of Aspergillus fumigatus of the invention
                                                                                                                                                                                                Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        subject (e.g. cancer), to prevent or contain contemination of an object by A. fumigatus, or to prevent or inhibit formation on a surface of a biofilm comprising A. fumigatus. The polynucleotides are useful for expressing recombinant protein for characterisation, screening or therapeutic use, as markers for host tissues in which the arrival or therapeutic use, as markers for host tissues in which the arrival or the surface of the surface 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to novel purified or isolated nucleic acids of essential genes of Aspergillus fumigatus. The isolated nucleic acids the invention are used to treat or prevent infections by a pathogenic organism such as A. fumigatus, to treat a non-infectious disease in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 23-APR-2001; 2001US-0285697P.

The present invention relates to Aspergillus fumigatus genes that are essential and are potential targets for drug screening. The methods and compositions of the present invention are useful for diagnosing and/or treating invesive Aspergillus fumigatus infection, including the allergic forms of the disease, such as Farmer's lung disease. They can also be found of the disease, such as Farmer's lung disease. They can also be used in various drug discovery purposes, such as expression of the recombinant protein, hybridization assay and construction of nucleic acid arrays. The present sequence represents an Aspergillus fumigatus essential gene full length genomic sequence, used during diagnosis and drug development in the invention. These genes share a high degree of sequence conservation with known essential genes of candida albicans. The sequence data for this patent is not represented in the printed New purified or isolated Aspergillus fumigatus nucleic acid molecule encoding a gene product, useful for diagnosing and/or treating invasive fungal infections, such as Farmer's lung disease. specification, but was obtained in electronic format from WIPO.
